

Integration with Priority Software's ERP-system

Successful integration between Priority Software's ERP system and other business systems, developed by Copernicus.

Seamless integration for optimal business processes

Optimize your processes with Priority Software's ERP-system. With comprehensive business management functionalities, Priority Software enhances efficiency, reduces operational costs, and improves decision-making.

As a technology partner of Priority Software, Copernicus provides the necessary integration between the ERP-system and other business systems. Together, we aim for optimized and streamlined business processes.

Why Copernicus?

- ✓ Integrated with various business systems.
- ✓ Complete EDI support.
- ✓ Proactive service.
- ✓ Transparent pricing model.
- ✓ A friendly company to work with.

Data flows

Our team of integration specialists has extensive experience in developing various connections across different industries. We can confidently say that they understand your business operations and speak your language. This is incredibly beneficial, as the integrations will support these processes. Through our integration platform, 'Niklas,' the data will be exchanged.

Approach

At Copernicus, we begin with a 'Sprint 0,' a preliminary investigation. In an exploratory meeting, we determine with the involved parties which data flows are within scope and how we will exchange data with the back-end systems. Based on the desired data flows, we will outline the cost estimate and define the timeline.

Costs

One-time	Depending on the project scope
Monthly	Starting from €27,50,-

One-time costs cover the development of the integrations, coordination with involved parties, and the implementation of the integrations on our integration platform.

Monthly costs are charged for the use and hosting of our integration platform.
