

# We Increase the revenue of Fulfillment Centers

[CONTACT US](#)

Dynamacs offers **Real Time Multi-Agent Optimization & AI-based Storage Ordering** solution that is already installed and running automatically at customer sites.

The product is based on a unique patented technology developed by Prof. Roie Zivan and Dr. Sofia Amador Nelke, both co-founders. It combines AI and game theory to enable real-time optimization, improving processes.

## Our Customers and Partners Speak for Us

"Even with fewer employees, we have managed to increase our productivity dramatically. We accomplish much more with less staff."

"Dynamacs will help us achieve our strategic goals. The optimization is a game changer for us"

Our product features seamless API integration with Priority WMS

"We conducted in-depth research and met with dozens of companies. Dynamacs was the first technology that actually improved our efficiency."

## Accomplished Milestones

**Traction**  
Paying costumers

**Priority** 1<sup>st</sup> ISV agreement  
Authorized Partner

Fully automated, bugless, field-proven platform

One pending patent (PCT national phase)  
One patent in the initial state (provisional phase)

We manage to **enhance efficiency** by **dozens of percents!!!**, it led to cost savings and increased productivity.

The system optimizes picking and Storage ordering in warehouses in real time, using a smart algorithm to assign tasks efficiently to workers, robots, and autonomous tools. It connects seamlessly to the existing WMS via API, running in the background without changing current workflows.

### Proven Benefits:

- ✓ Faster picking times with reduced errors.
- ✓ Direct task assignment to workers' handheld devices without manual intervention.
- ✓ Real-time updates based on inventory changes and demand.
- ✓ Silent API integration with the existing WMS.

**Next October**

**"Hope dies last"**
