What is Next Plus

No-Code Performance Support platform for human augmentation
in **Manufacturing and Maintenance.**

Utilizing Paperless technologies, Industrial IoT and Analytics.

Addressed challenges

**High personnel
turnover**

**Low machine & personnel
productivity level**

**Human error &
quality issues**

**Lack of real
data & insight**

**High setup &
fault downtimes**

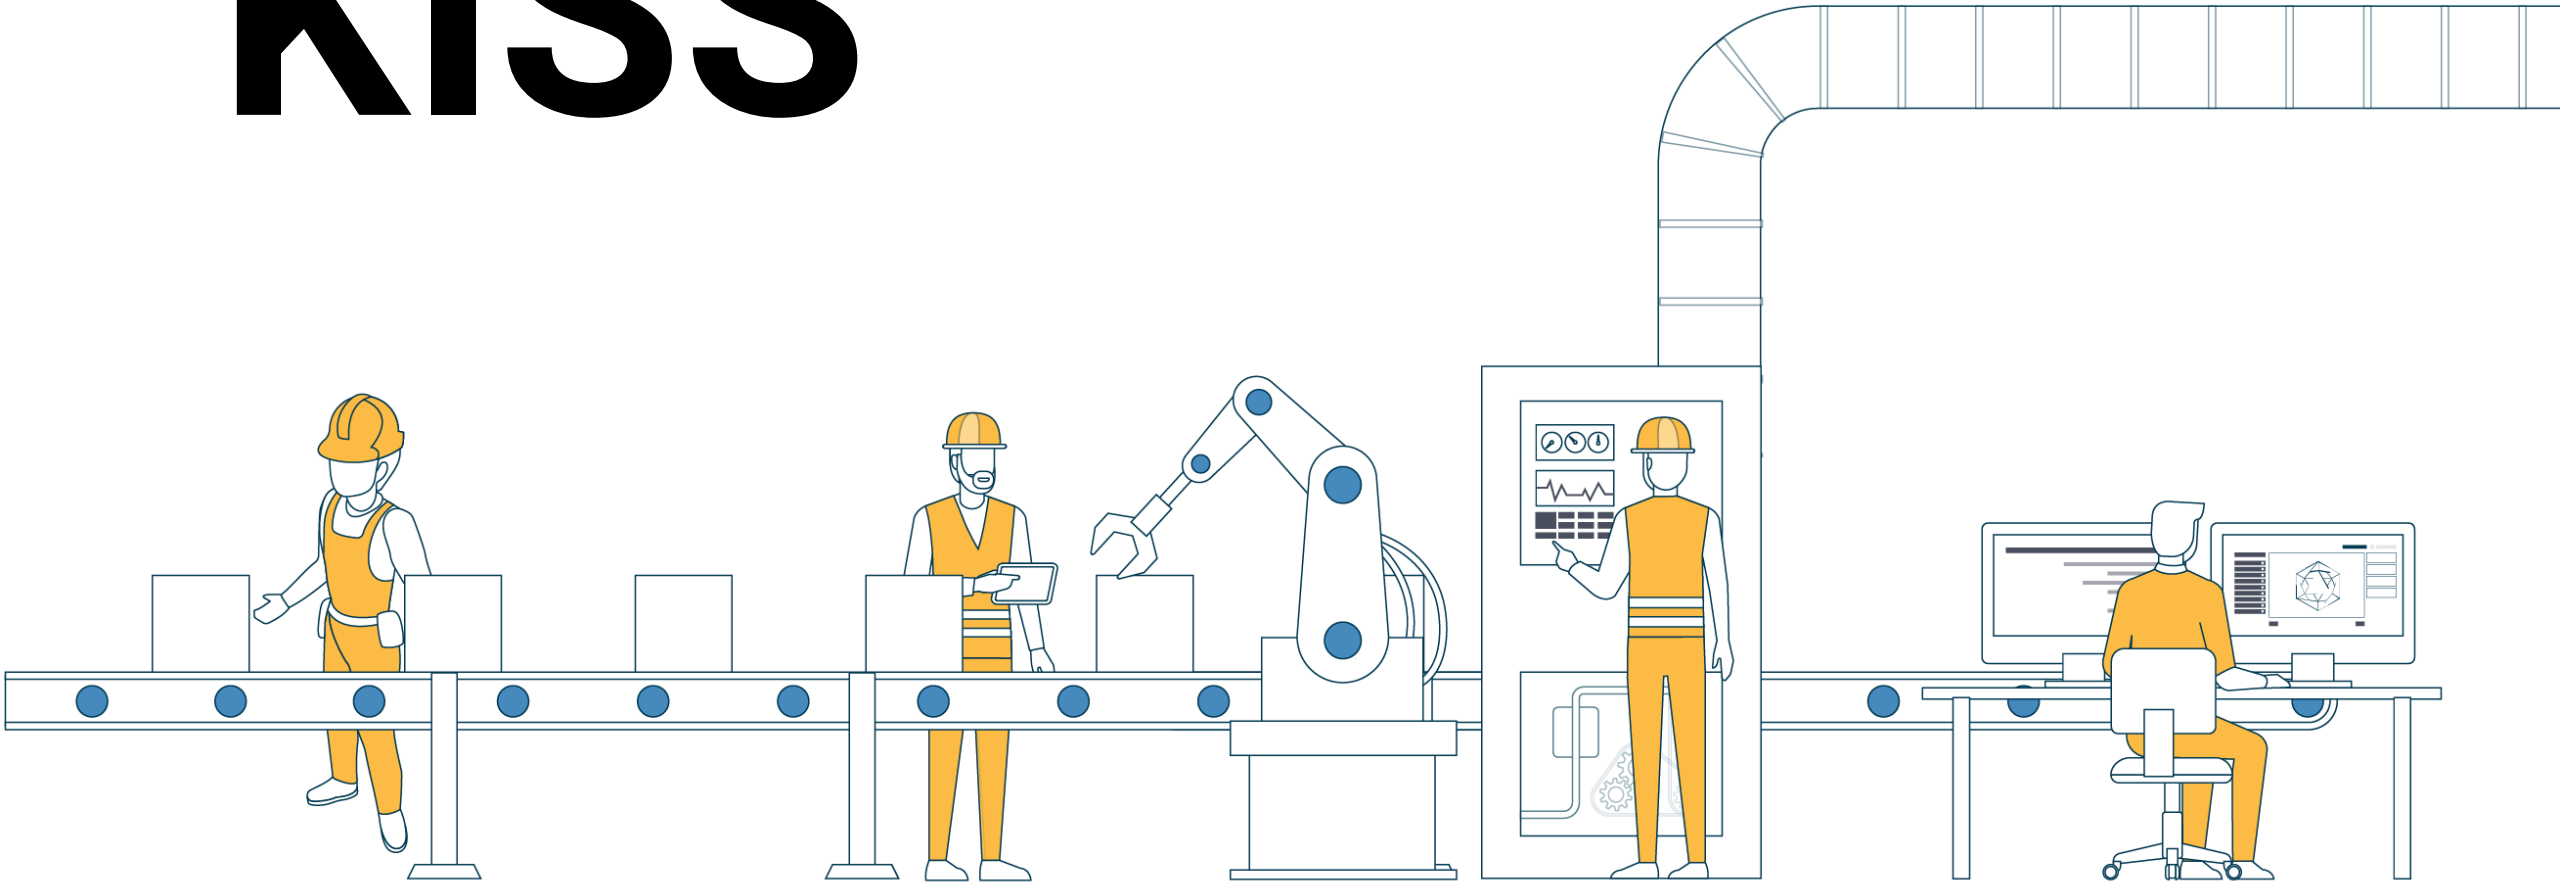

**Abundance of
systems & tools**

How do we do it?

KISS

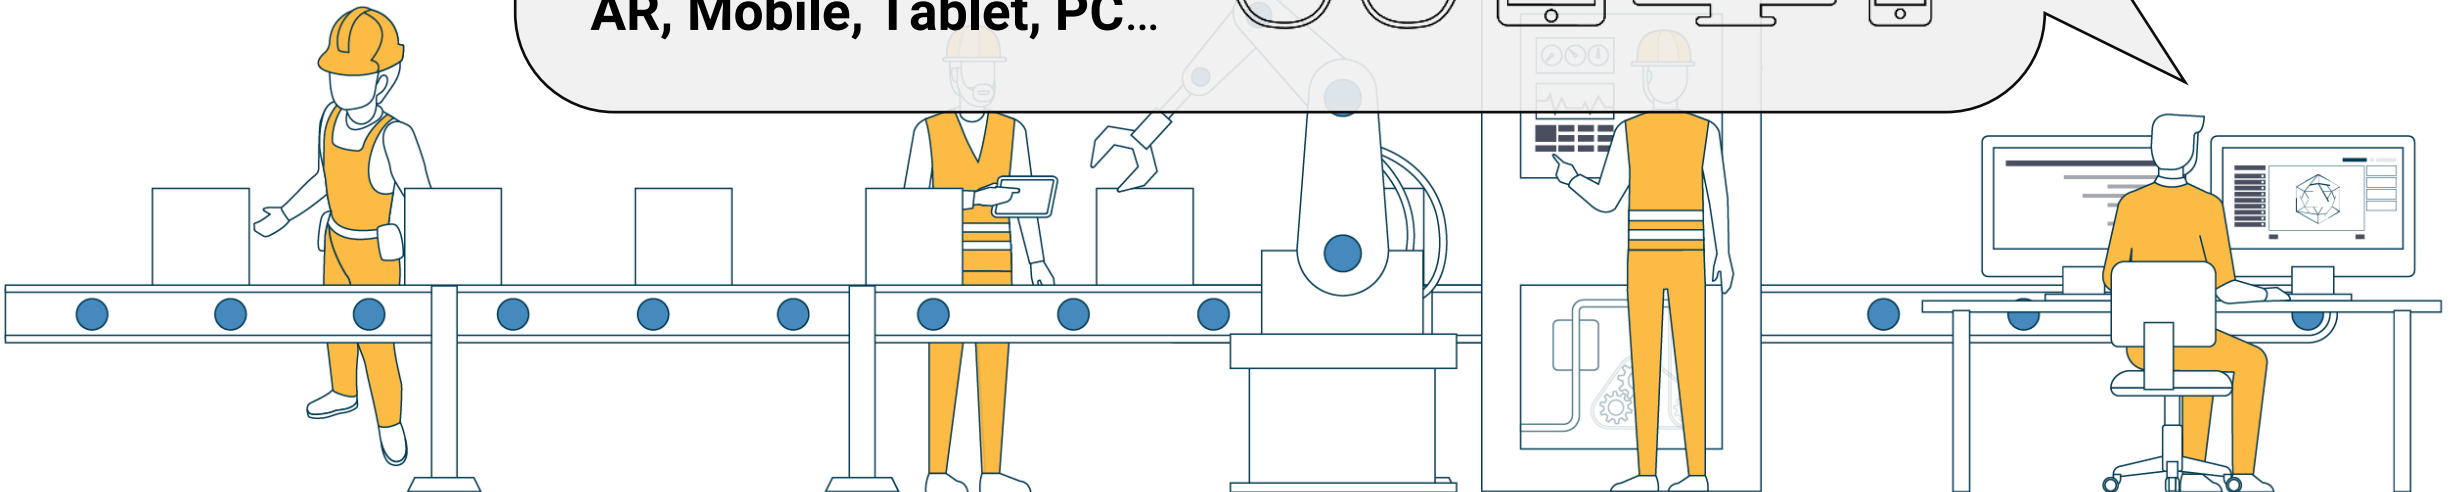

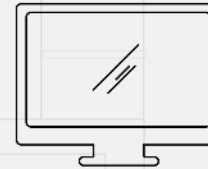

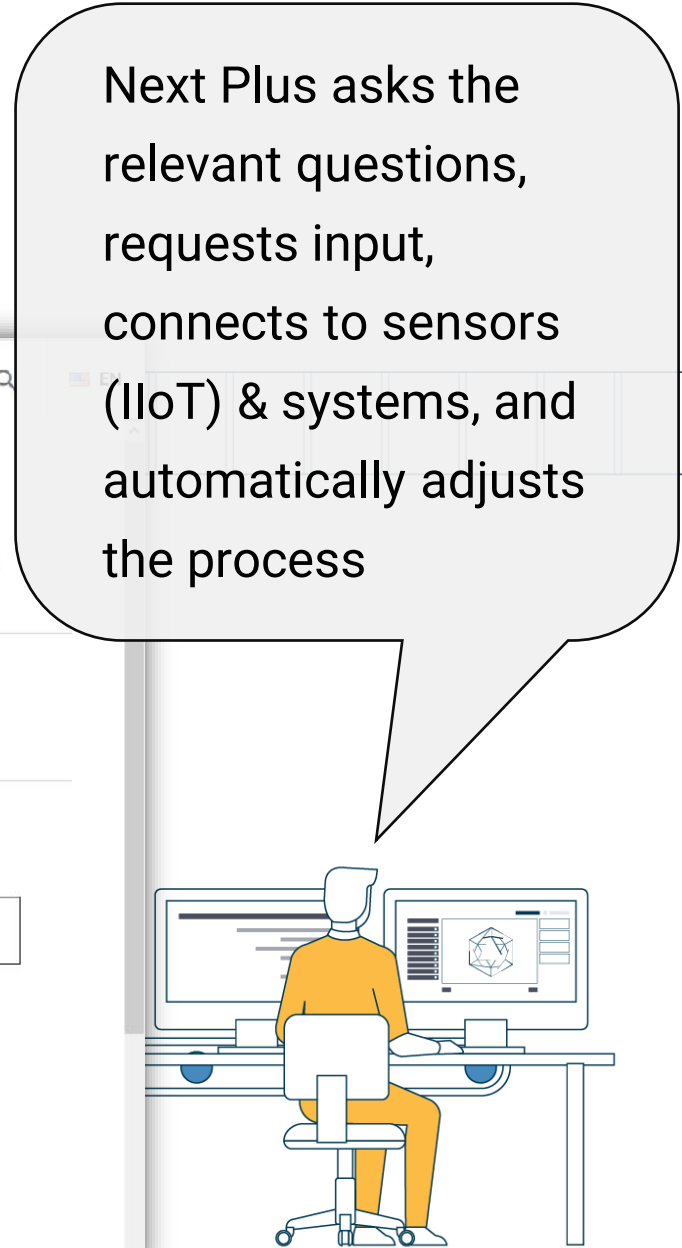

Performance Support

Next Plus accompanies the employees in every step during **manufacturing, test, diagnosis** and **fault fixing** processes.

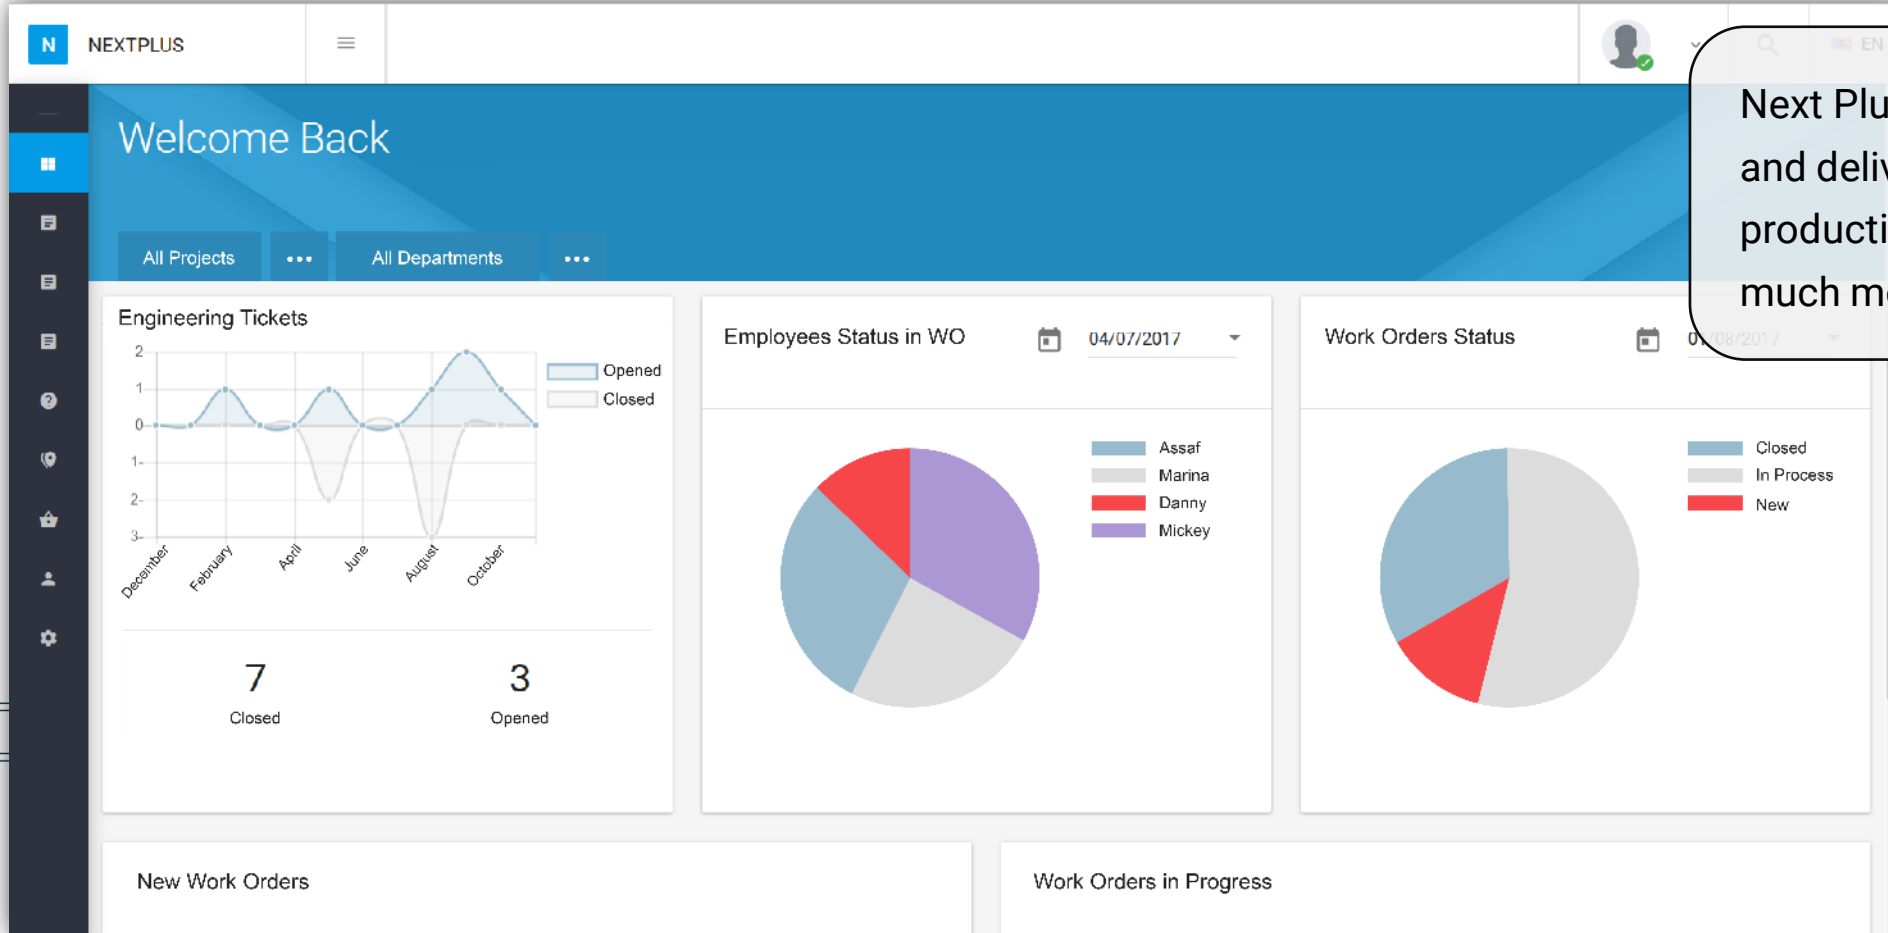

Just in time knowledge
platform agnostic:
AR, Mobile, Tablet, PC...

Actionable Insights

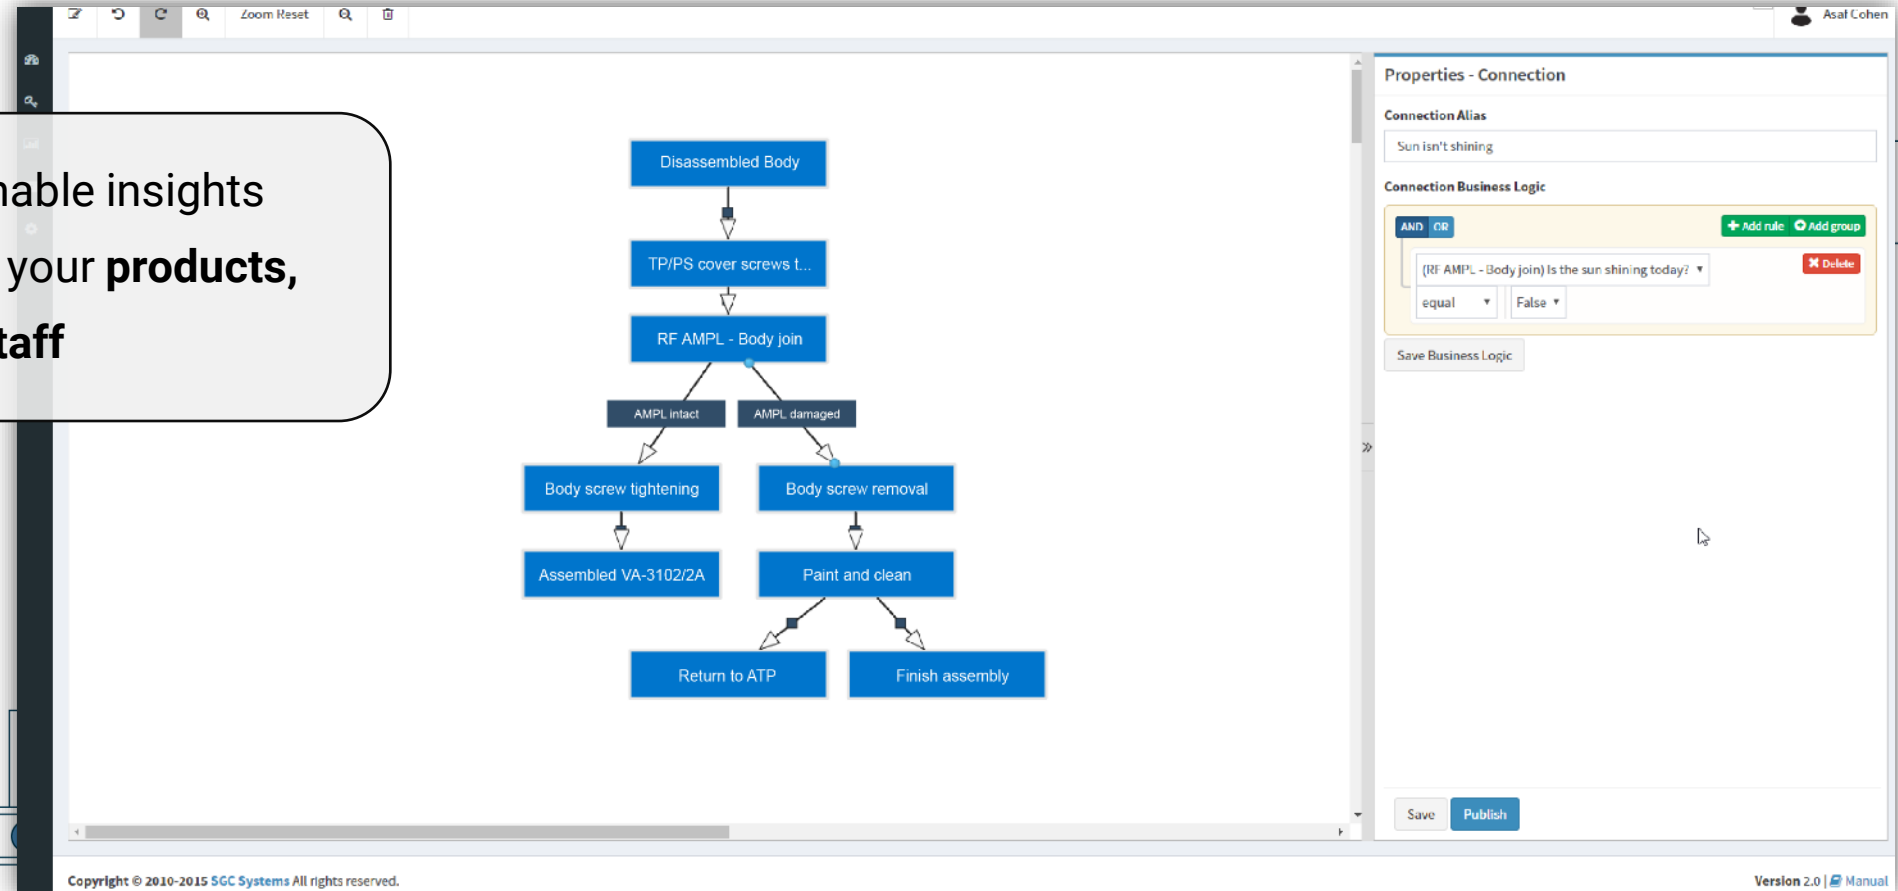

Next Plus digests all the data collected and delivers **actionable insights** about productivity, quality, personnel and much more.

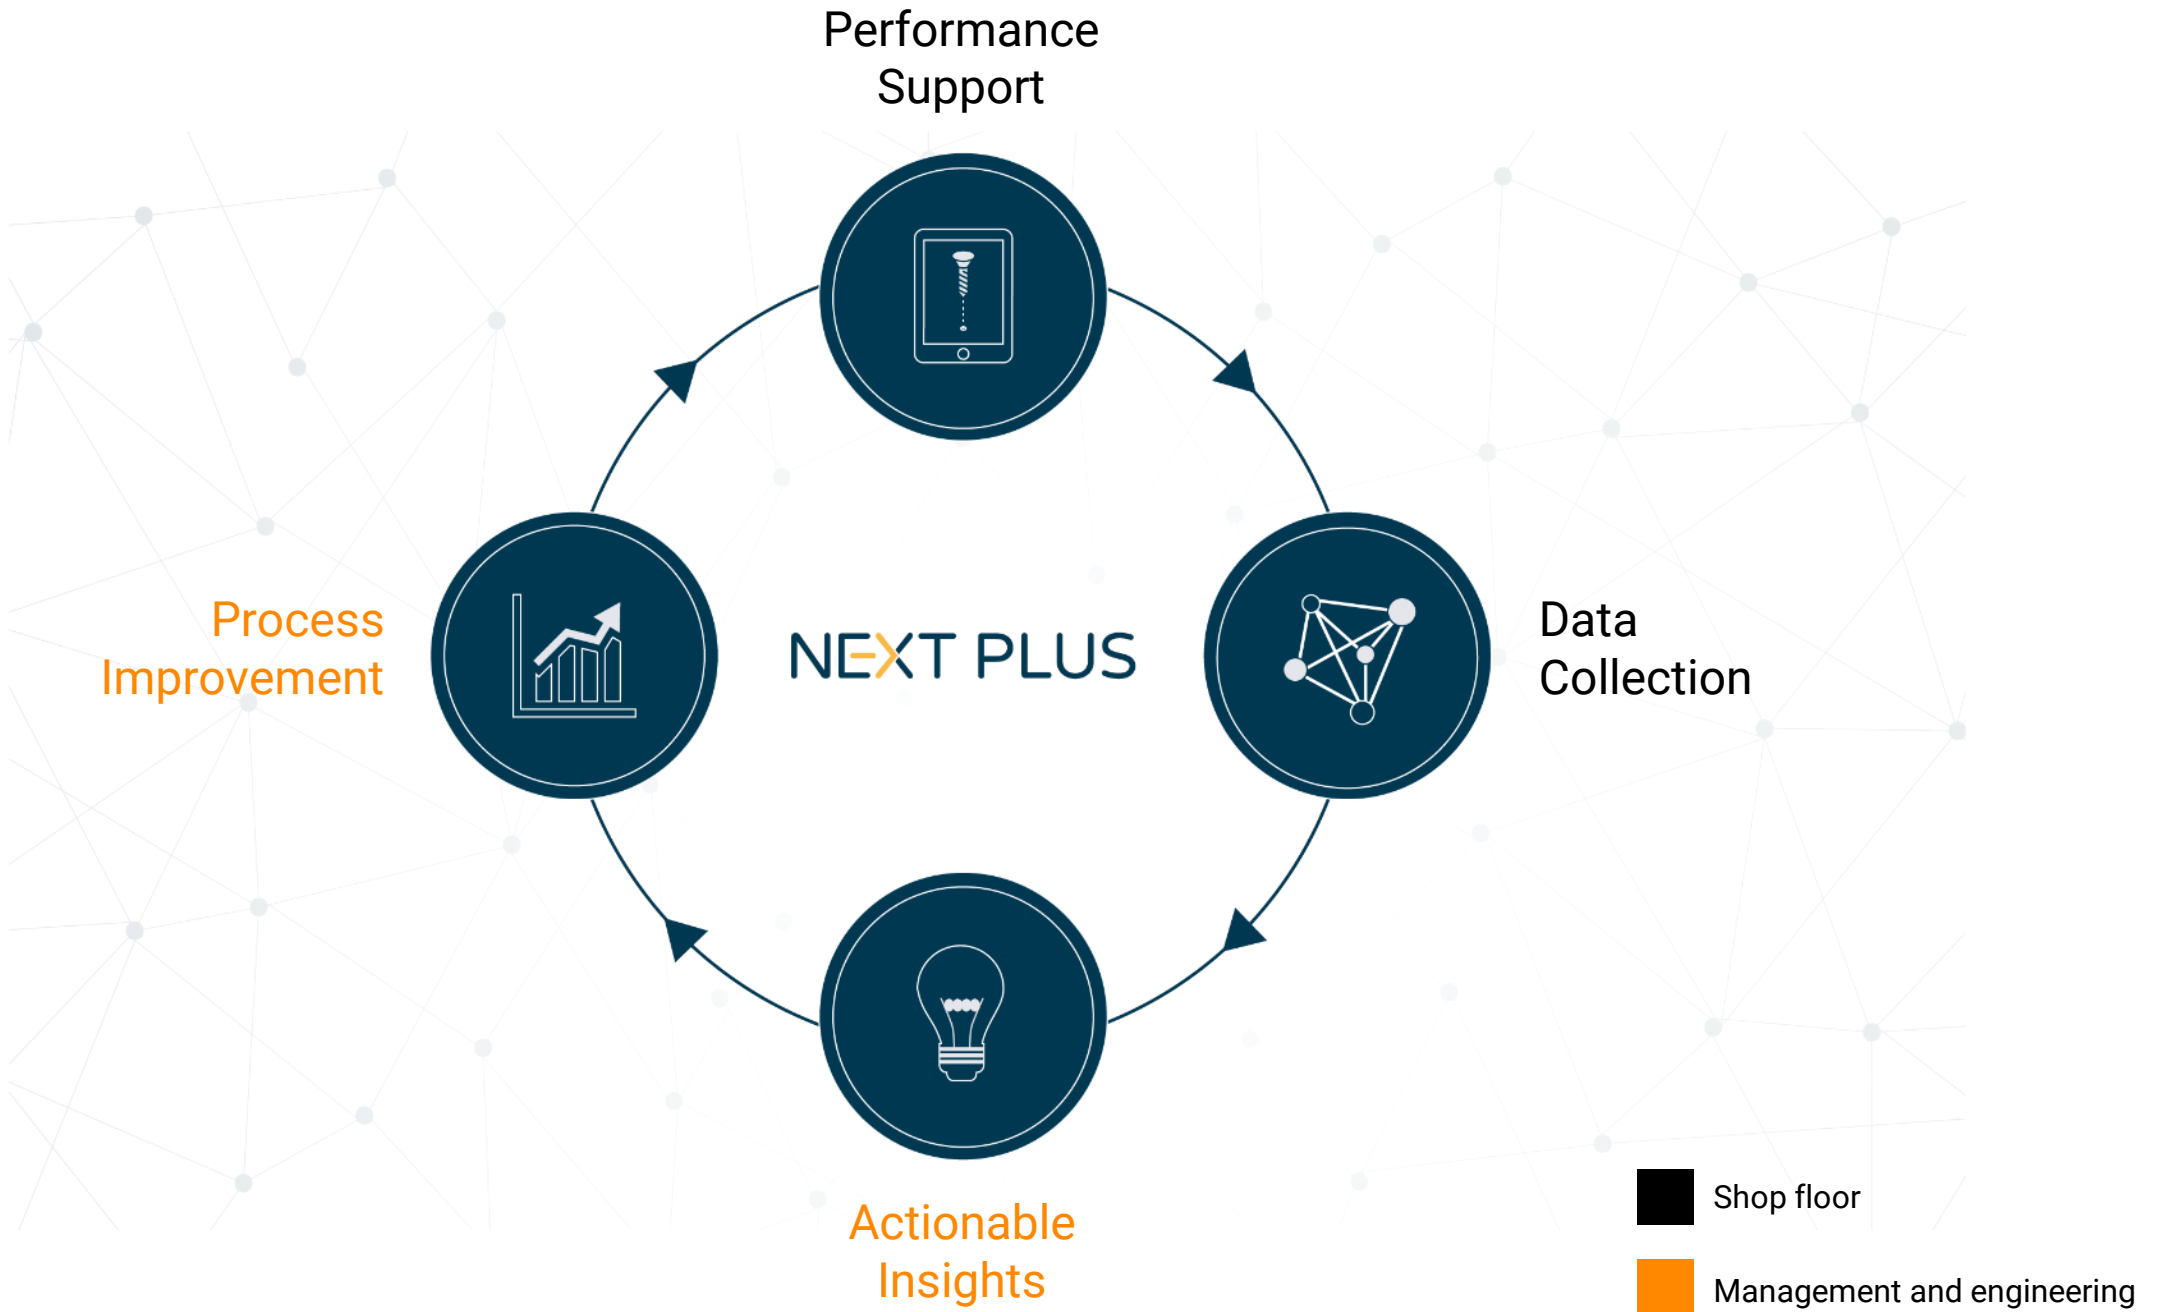

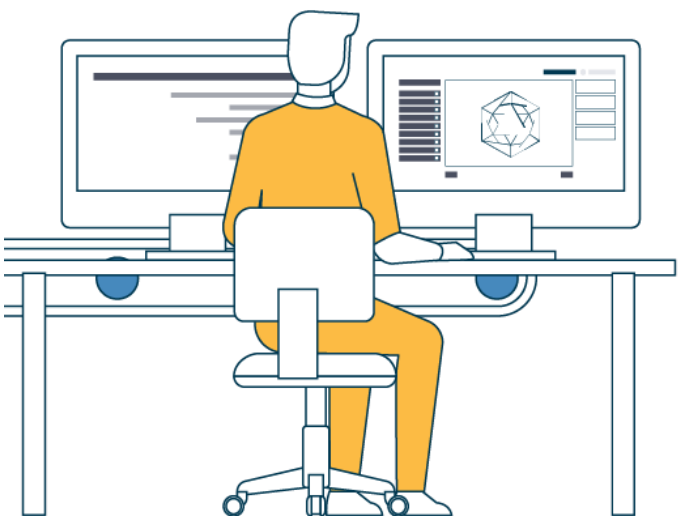

Process Improvement

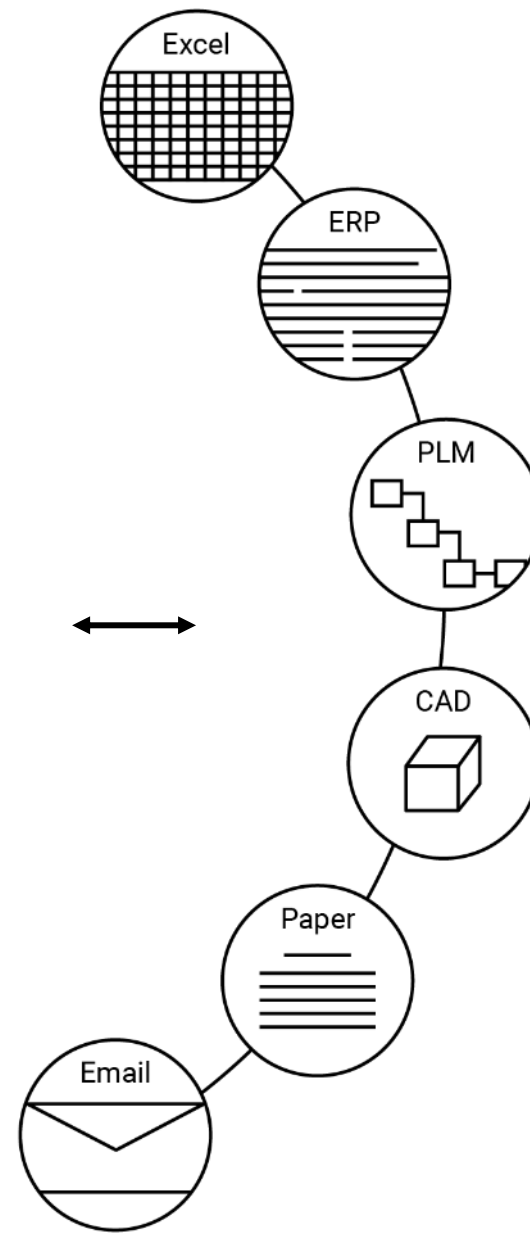

With these actionable insights
you can **improve** your **products**,
processes and **staff**

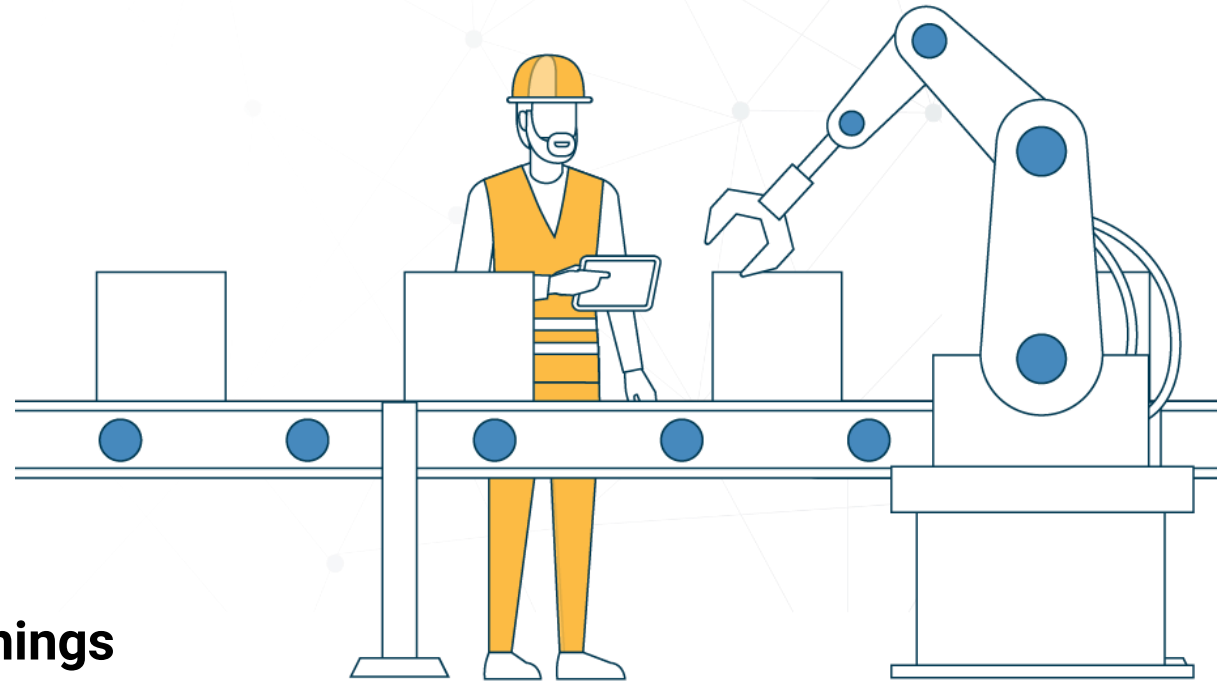

NEXT PLUS

Connecting your personnel
seamlessly to the Industrial IoT

Actual Industry 4.0

*We call this the HIoT – **Human Internet of Things**

Trusted by

Why factories choose Next Plus

Operational and training
cost reduction

Less operational down
time and setup time

Knowledge
preservation

Quality improvement
and regulation

Real time
process control

Extremely fast
System deployment

What our customers say

Training Manager

"One of the biggest challenges of a training manager, is to minimize training time as much as possible. Saving the organization pricy resources and valuable time. In that regard, Next Plus has managed to dramatically improve training efficiency."

"In one of our case studies, from a 30-day training session for new customer technicians, we were able to **decrease to an 18-day session**, by using Next Plus for on job performance support. **That's 40% decrease in training time!** But the really important part is that all this was done with **no decrease in the quality metrics** of the technicians over time."

What our customers say

Operations Manager

"Before Next Plus many of the most basic operations on the production floor would be time consuming, costly and would lack tracking abilities."

"Now, thanks to Next Plus, personnel **training time has decreased by 30%** and **production reporting time has gone down by 70%**. Moreover, all essential manufacturing data has been aggregated into a single point of entry solution, allowing me to draw **insights about quality, personnel and much more.**"

Cross organizational adoption

Production line personnel

Work orders Execution

Field and floor technicians

Machine setup and maintenance

All levels of management

BI and actionable insights

Engineering

Content conversion, creation and maintenance

Quality

Quality assurance actionable data collection and guidance

General - features and benefits

#1

Cross language, content and UI – including English, German, Spanish, Russian, Chinese out of the box.

#2

Multi-type visualization – 3D, CAD (compliant with SolidWorks Composer™), video, image, 2D, drawing, etc.

#3

Single system for the operator connected to everything needed in real time with extreme ease of use.

#4

Easy existing content conversion for extremely fast system deployment and low CAPEX.

#5

Installed and stored On-Premise or in the Cloud, dependent on the customer's IT needs and architecture.

General - features and benefits

#1

Easy to use form creation tools

#2

BI dashboards and connectivity capabilities

#3

Highly customizable user permissions module with SSO options

#4

Data collection on every step, acting as an in-process sensor for parameters that couldn't been measured prior to Next Plus

Manufacturing - Features and Benefits

#1

Open architecture – allowing Industrial IoT, ERP, PLM and CAD connectivity

#2

Built-in quality management system, allowing AS9100 compliancy

#3

Ultra-Fast ECO deployment on the shop floor with zero training cost

#4

Real time communication between the assembly and production line and engineering department

Maintenance - features and benefits

#1

Automated complex fault diagnosis fix and analysis processes

#2

Real time, accurate stats on MTBF, MTTR, common faults, technician productivity and much more

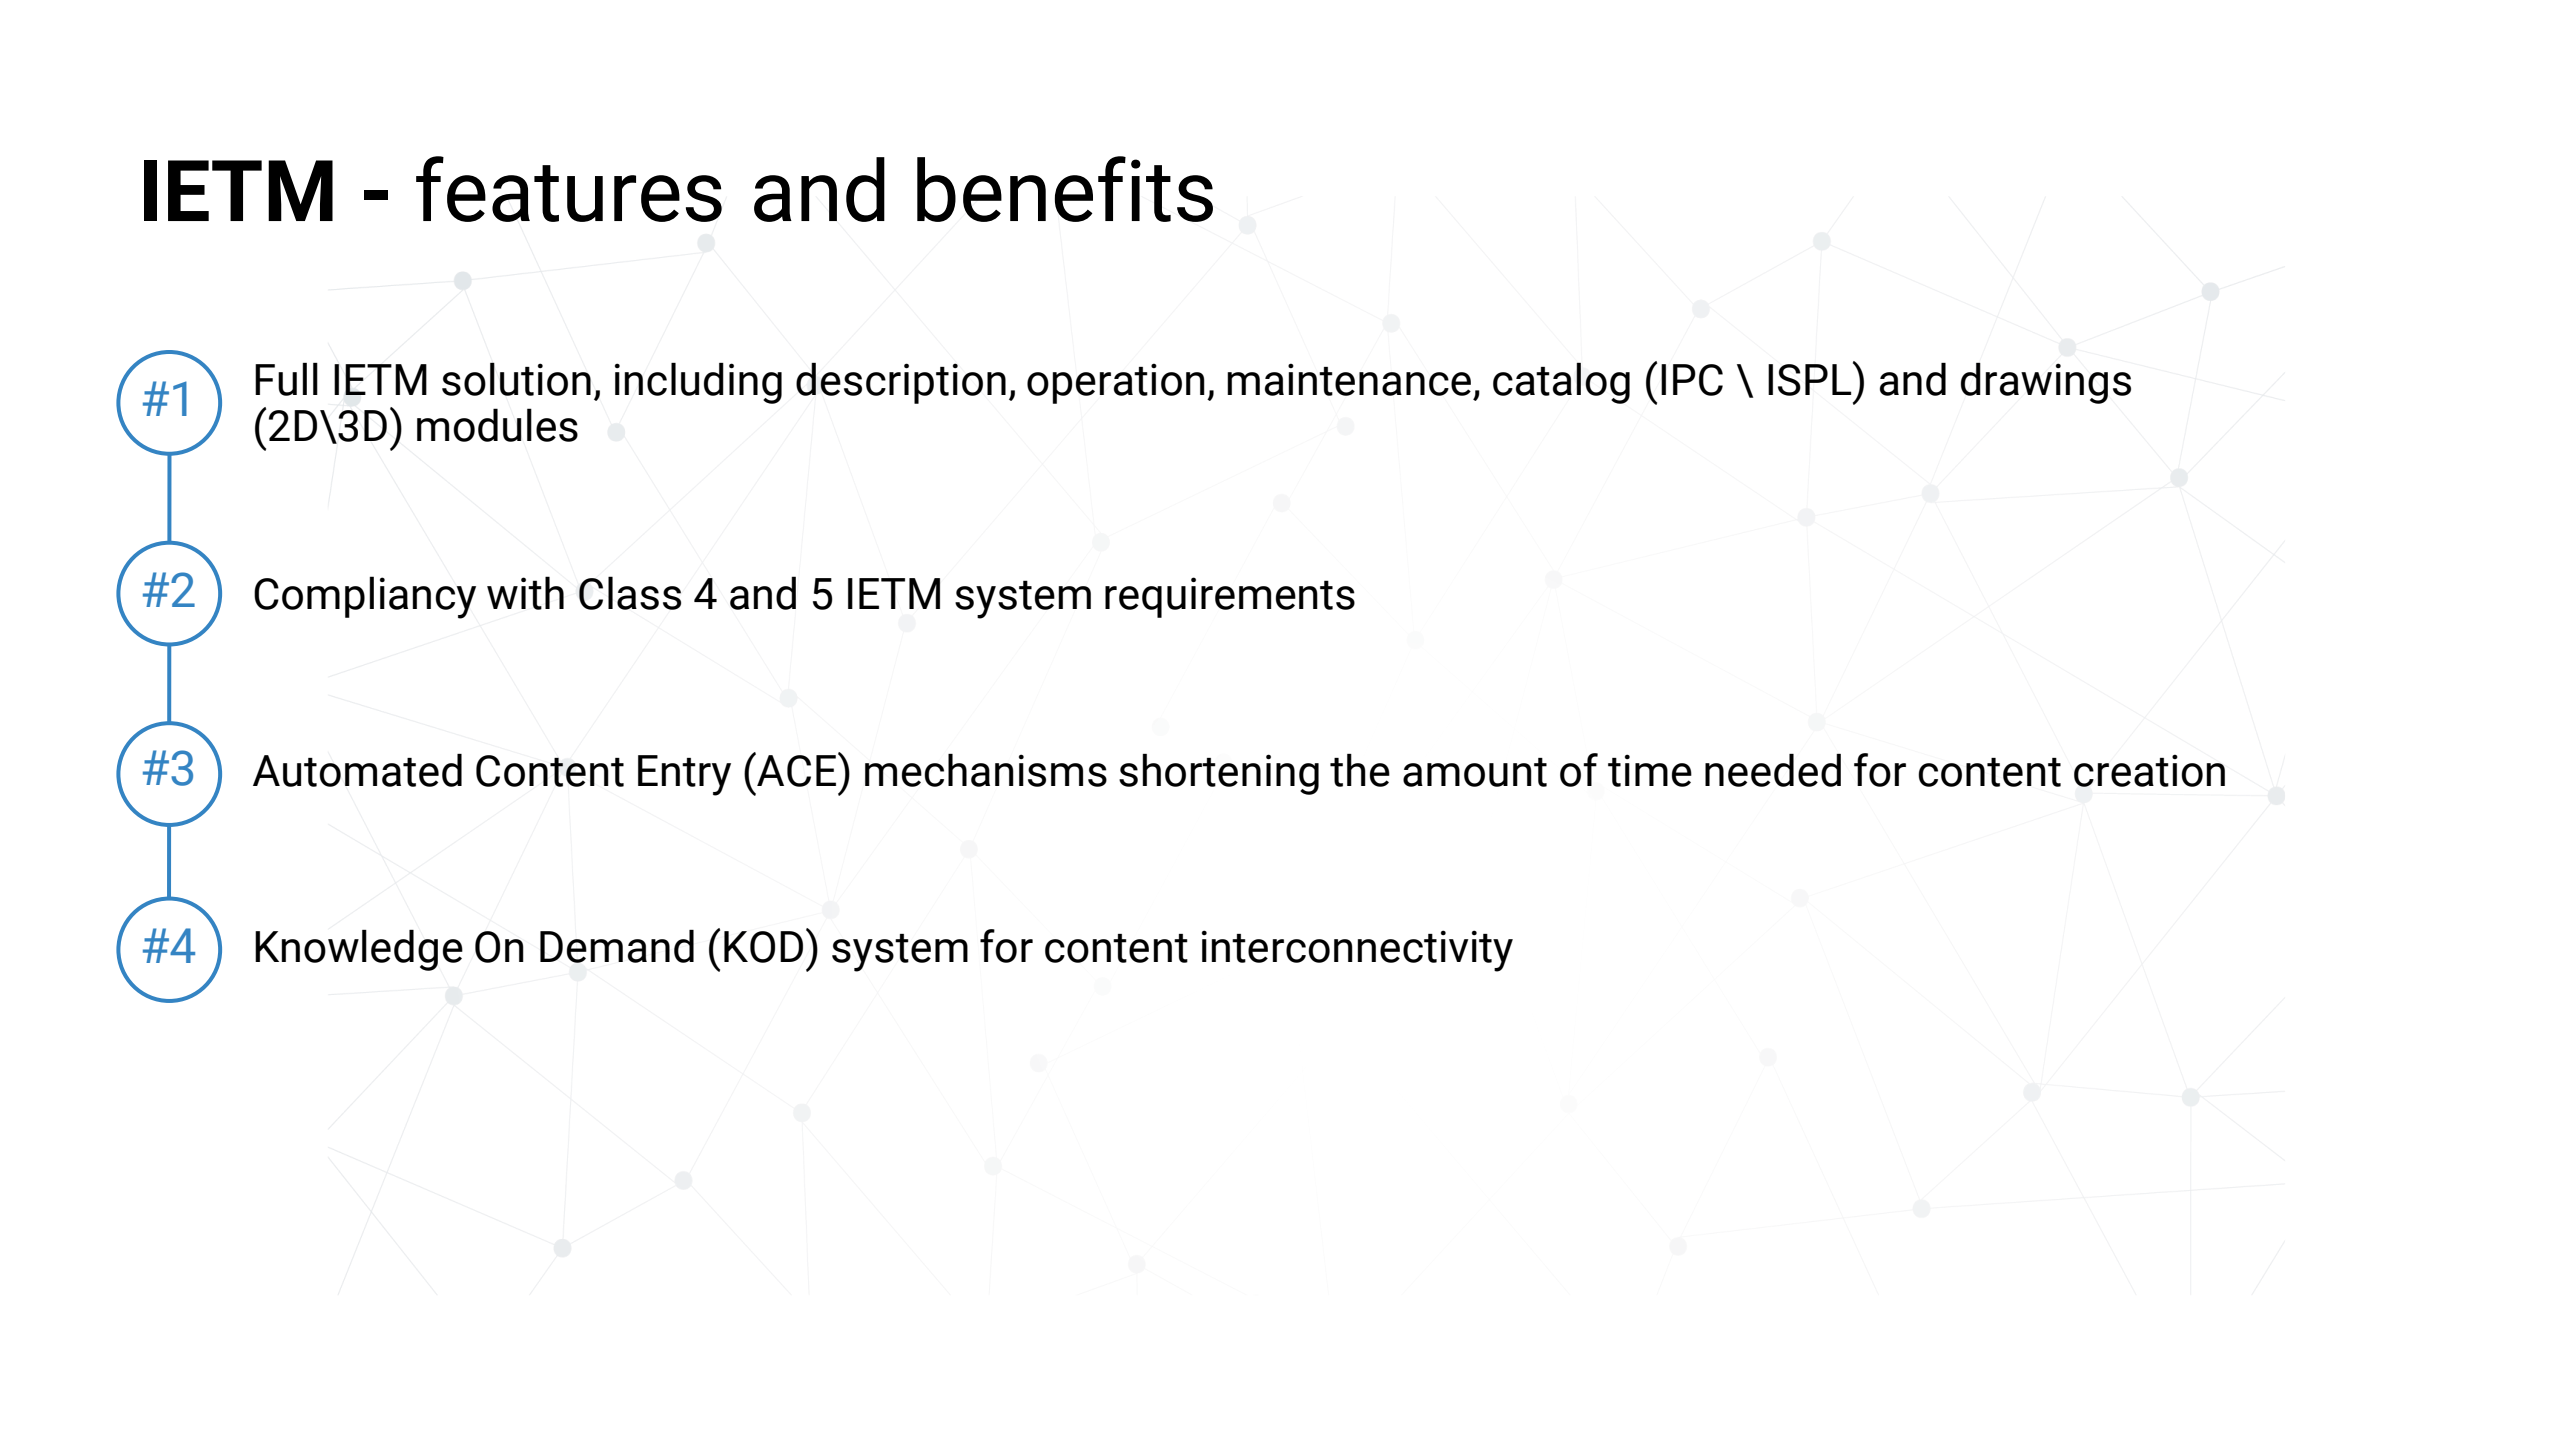

#3

Open architecture – allowing test equipment (STE and GTE), ERP and service systems connectivity

#4

Real time communication between field technicians and office SME's

IETM - features and benefits

- 
- #1 Full IETM solution, including description, operation, maintenance, catalog (IPC \ ISPL) and drawings (2D\3D) modules
 - #2 Compliancy with Class 4 and 5 IETM system requirements
 - #3 Automated Content Entry (ACE) mechanisms shortening the amount of time needed for content creation
 - #4 Knowledge On Demand (KOD) system for content interconnectivity
