

BillBot.AI

AI based OCR for Automatic Invoice Processing with high accuracy and no need for AI training

Revolution in Automatic Invoice Processing! Workload reduction and business efficiency improvement

Many organizations receive hundreds or thousands of original and scanned invoices in PDF format. The process of invoice reception involves extracting the information from documents and entering it into the organization's financial and ERP systems.

The common method for invoice reception is manual data entry, where each invoice is processed individually, and the relevant details are typed into the organization's IT systems.

This process is costly, lengthy, and prone to human errors, typing mistakes, low throughput, and more.

BillBot.AI – AI based OCR for Automatic Invoice Processing Solution

Galil Software has launched a revolutionary OCR cloud-based service powered by AI capabilities, designed for perfect extraction of information from PDF documents.

The service is tailored for handling invoices, orders, delivery notes, and receipts with high accuracy and no need for AI training.

The service allows the upload of both original and scanned PDF documents and extracts the relevant text fields needed by the organization.

The service returns the extracted data in formats that can be loaded into the organization's systems.

The service supports document reading in any language (Hebrew, English, Arabic, or any other language).

The completion of automatic invoice processing in the organization's systems

Galil Software provides full customization services, enabling data loading into the organization's IT systems.

These customization services are based on the development of dedicated interfaces and automation tools according to the organization's operational systems, such as Priority, SAP, etc.

Benefits of using BillBot.AI - AI OCR for Automatic Invoice Processing

No need for AI training

BillBot.AI handles invoices without human intervention and without the need for AI training to recognize each supplier's invoice by the OCR.

Accuracy

BillBot.AI offers high accuracy rates and advanced error detection capabilities.

Speed

BillBot.AI extracts text at digital speed compared to manual entry.

Throughput

BillBot.AI operates 24/7 with a significantly higher capacity than manual entry.

Cost

BillBot.AI provides a service at a significantly lower cost compared to manual entry.

Tracking and Control

BillBot.AI enables the generation of usage reports and statistical information for the client.

Who is the solution suitable for?

The solution is suitable for organizations processing a large number of invoices, delivery notes, orders, and receipts each month.
